

**Community Health Needs Assessment
and Implementation Plan**

June 30, 2019

UF Health Shands Hospital

UF Health Strategic Plan 2015-2020

The Power of Together

At the heart of everything we do at UF Health is our commitment to improve the lives of our patients and serve our communities as we move medicine forward.

Our missions of patient care, research, education and community service support each other and create a virtuous expanding circle.

Introduction

UF Health Shands Hospital has a long and storied history of providing healthcare services, education and research to promote the health and wellness of the residents of Florida. Since 2005, the efforts of UF Health Shands Hospital to provide community service in five categories (unsponsored charity care, health professionals education, community and regional health services, donations and in kind services and scientific and clinical research) have been documented, tracked, quantified at cost and reported in the footnotes of the audited financial statements. These audited financial statements are posted annually on the UFHealth.org public website. In the fiscal year ended June 30, 2018 UF Health Shands Hospital provided an estimated \$129.2 million in Community Benefits.

In 2013 UF Health Shands Hospital (Shands) formally adopted the initial Community Health Needs Assessment (CHNA) and Community Health Improvement plan (CHIP), in accordance with requirements of the Federal Affordable Care Act (ACA). The process to complete a CHNA involves several key steps, including: define the service area and community served, collect and analyze data, gather and consider community input about health needs and determine significant health needs. The subsequent CHIP process prioritizes the identified needs from the CHNA, considers available community resources and adopts implementation goals and activities.

The initial 2013 CHNA and CHIP focused on Alachua County. Since the initial assessment and CHIP adoption, UF Health Shands Hospital has been an active participant in CHIP improvement efforts within the community and has joined with many community partners to improve the two areas of focus identified in the original CHNA and CHIP and reconfirmed through the 2016 CHNA and CHIP: *Access* to comprehensive primary care and preventive services and to promote *wellness* among residents.

As required by the ACA, the UF Health Shands Hospital update to the original 2013 CHNA and CHIP occurred with the 2016 Community Health Needs Assessment and Implementation Plan. The 2016 plans are posted at the UF Health website. The ACA currently requires a three year update for hospitals for their CHNA and CHIP analyses. An update is required in 2019 for UF Health Shands Hospital.

In the 2019 CHNA, UF Health Shands Hospital continued to use the expanded definition of community that was adopted and used in the 2016 CHNA. The 2019 CHNA includes: Alachua, Bradford, Columbia, Levy, Marion, Putnam and Suwannee counties. Together in 2018, those counties comprise approximately 67% of the inpatients and 84% of the emergency department visits at UF Health Shands Hospital. The population of the defined community area is approximately 848,000 individuals or 4% of the population of Florida. The land area is about 6,100 square miles, which is 11% of the total land mass of Florida.

The population represented in the 2019 CHNA geographic area is a diverse group of residents. The vast area includes both urban and rural areas. The population is 49% male and 51% female, 78% white; 16% black; 2% Asian; 1% other races and 3% multiple races. Ethnically, the Community is comprised of about 10% Hispanic or Latinos, which is less diverse than the overall state Hispanic population of 24%.

When conducting a health assessment, it is important to understand that there are many different components that affect the health status of residents, including components that are not traditionally perceived as impacting health needs or status. These factors are commonly referred to as the social determinants of health and include economic factors (income, employment), education status (reading scores, high school graduation rates) and other environmental factors (transportation, crime, health care providers, clean air and water). In the defined CHNA area, there is a disproportionate amount of poverty experienced by residents when compared to the Florida average and the United States average. The poverty status affects all ages of residents, but children are especially impacted. Within the CHNA, three of the counties, Levy, Putnam and Suwannee have about 40% of their children living at or below 100% of the Federal Poverty level. Within the region 11% of the adults have not graduated from high school. The region also reports 24% of the population receiving Medicaid benefits and 16% receiving Supplemental Nutrition Assistance Program (SNAP) benefits. Within the rural areas of the counties, access to transportation is a significant issue. When these factors are combined together they represent a social burden that can adversely impact residents' health status. The assessment analyzed and reviewed available data from a wide variety of sources to identify areas within the region of high socio-economic needs.

Data was analyzed from a wide variety of resources including: 2016 Alachua County Health Assessment, 2015 Marion County Health Assessment, 2019 Alachua and Marion County Community Health Surveys, The Friendship Seven sponsored - 2018 Alachua County Racial Inequity Study, U.S. Centers for Disease Control and Prevention (CDC), U.S. Census Bureau, Robert Wood Johnson Foundation (RWJF) County Health Rankings, Americas Health Rankings, Conduent Healthy Communities Institute (HCI), Community Commons, UF Health Shands Hospital internal data, Florida Department of Health Florida Charts, UF HealthStreet program, UF Putting Families First program, UF Health Dental School, United Way of North Central Florida and the United Way of Marion County ALICE reports and United Way 211 Counts data from the United Way organizations serving North Central Florida, Marion County and Northeast Florida. Key focused interviews were also conducted across the region with a variety of stakeholders including providers, Department of Health officials and citizens.

The data analysis yielded a wide variety of key insights related to the health of area residents. Composite index scores such as those offered by RWJF County Health Rankings and the UF Health Community Dashboard, point to a diverse number of underlying health concerns that cross many domains – for both chronic and acute conditions - as well as health behaviors and lifestyle choices and socio-economic and environmental conditions. There is much health need and significant healthcare gaps identified across the region.

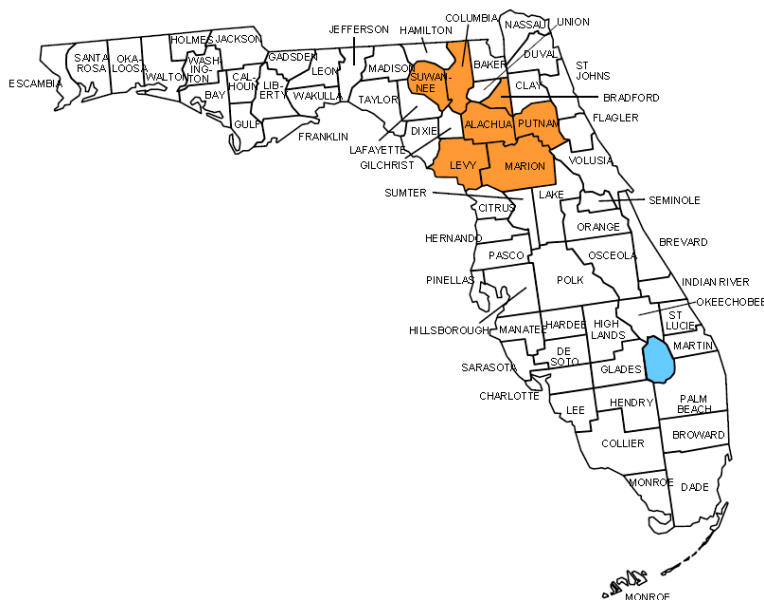

Recognizing that data alone does not bring clarity but rather can be used to help assess need and set priorities, community input was considered as part of the data analysis. Both the recently conducted 2019 Alachua and Marion County Community Health surveys contained focused health survey responses from several thousand area residents. The 2018 Alachua Racial Inequity study and the 2018 GNV4ALL – Gainesville Empowerment Zone canvassing results were also reviewed. Internal resources such as those from UF HealthStreet also provided insight, as did focused interviews with key individuals in several counties. The areas of concern that were identified varied within communities, but there were several common concerns and overlapping themes

including management of chronic conditions that impact wellness with health factors such as obesity, tobacco use and substance abuse were identified. In addition, access concerns for primary care, specialty care, dental care and mental health were noted. Community residents also identified several non-primary health care concerns and needs that impact health status including affordable and safe housing, food insecurity, utility costs and inadequate transportation.

Upon consideration of the information collected and analyzed for the 2019 CHNA, senior administration at UF Health Shands Hospital recommended to the Board continuation with the original areas of focus - residents' will be able to *access* primary care and preventive services and promotion of *wellness* across the expanded CHNA region. The UF Health Shands Hospital Board will be asked to accept and formally adopt the 2019 CHNA and CHIP at their June 26, 2019 Board meeting.

Service Area and Community Served

In 2018, a data review reconfirmed that the definition of service area and community used in the 2016 Shands CHNA and CHIP would be appropriate for the 2019 CHNA. The seven county Shands community used for the 2019 CHNA is: Alachua, Bradford, Columbia, Levy, Marion, Putnam and Suwannee counties. Residents from these counties comprise 67% of the total inpatient volume at UF Health Shands Hospital and account for approximately 84% of the Emergency Department visits.

Total Geography and Population

A total of 847,703 people, approximately 4% of the Florida population, live in the defined seven county service area. Geographically, the total square miles of the service area is 6,089 square miles, or 11% of the total land mass of Florida, according to the U.S. Census Bureau American Community Survey 2012-16 5-year estimates. The geography encompasses a mix of urban and rural areas. Population density for this entire area, estimated at 139.21 persons per square mile, is greater than the national average population density of 90.19 persons per square mile, but less than the state density of 371.64 persons per square mile.

	Total Population	Total Land Area (Square Miles)	Population Density (Per Square Mile)
CHNA Region	847,703	6,089.23	139.21
Alachua	256,581	875.05	293.22
Bradford	26,919	293.96	91.57
Columbia	68,198	797.54	85.51
Levy	39,707	1,118.23	35.51
Marion	340,341	1,588.03	214.32
Putnam	72,304	727.88	99.34
Suwannee	43,653	688.55	63.4
Florida	19,934,451	53,638.93	371.64
United States	318,558,162	3,532,068.58	90.19

Data Source: US Census Bureau, American Community Survey. 2012-16. Source geography: Tract

Total Population by Gender

The total population mix by gender is similar to Florida and the United States overall. Bradford County stands out with males being more prevalent than females. This is due to the presence of several state correctional facilities (prisons) in that county.

	Male	Female	% Male	% Female
CHNA Region	414,543	433,160	49%	51%
Alachua	124,004	132,577	48%	52%
Bradford	14,875	12,044	55%	45%
Columbia	35,318	32,880	52%	48%
Levy	19,555	20,152	49%	51%
Marion	163,611	176,730	48%	52%
Putnam	35,711	36,593	49%	51%
Suwannee	21,469	22,184	49%	51%
Florida	9,741,262	10,193,189	49%	51%
United States	156,765,322	161,792,840	49%	51%

Data Source: US Census Bureau, American Community Survey. 2012-16.

Total Population by Age Group

The total population by age group for the region varies significantly across counties. The two largest counties in the service area, Alachua and Marion, have significant variations in age demographics. The Alachua County population, which includes the University of Florida, trends to a younger demographic (37.3% of population ages 18-34) than the state of Florida (21.7% ages 18-34) or the US (23.4% ages 18-34). Marion County, which includes the City of Ocala and several large retirement communities, has a significantly higher proportion of 65+ residents (27.8% ages 65 or older) than the overall defined CHNA service region (20.6% ages 65+), Florida (19.1% ages 65+) or the United States (14.5% ages 65+).

	Age 0-4	Age 5-17	Age 18-24	Age 25-34	Age 35-44	Age 45-54	Age 55-64	Age 65+
CHNA Region	45,288	118,279	101,554	103,415	88,324	102,889	111,987	175,967

Data Source: US Census Bureau, American Community Survey. 2012-16.

Total Population by Race

The population in the defined service region is similar in composition to the overall race demographics of Florida and slightly less diverse than the United States overall. The predominant race in the region is white, with 77.7% of the residents being white, vs 75.9% of the overall residents of Florida and 73.4% of the U.S. overall. The black race comprises 15.7% of the region's population versus 16.1% for Florida and 12.6% of the

United States. Alachua County has 5.8% of the residents (14,906 people) reported as Asian. Within the CHNA region Alachua is the county with the largest proportion of Asians. The proportions of other races represented within the region are similar to Florida demographics, but less diverse than the United States overall.

	White	Black	Asian	Native American / Alaska Native	Native Hawaiian / Pacific Islander	Some Other Race	Multiple Races
CHNA Region	658,780	133,189	21,394	2,423	761	8,825	22,331
Alachua	178,684	50,945	14,906	785	523	2,403	8,335
Bradford	21,033	5,214	166	26	8	41	431

Data Source: US Census Bureau, American Community Survey. 2012-16.

Total Population by Ethnicity

Compared to Florida or the United States, the defined region has a significantly lower population of Hispanic residents. The service area reflects 9.7% Hispanic or Latino population versus 24.1% for Florida and 17.3% for the United States.

	Total Population	Hispanic or Latino Population	% Pop Hispanic or Latino	Non-Hispanic Population	% Pop Non- Hispanic
CHNA Region	847,703	82,355	9.7%	765,368	90.3%
Alachua	256,581	23,079	9.0%	233,502	91.0%
Bradford	26,919	1,022	3.8%	25,897	96.2%
Columbia	68,198	3,788	5.6%	64,410	94.5%
Levy	39,707	3,148	7.9%	36,559	92.1%
Marion	340,341	40,579	11.9%	299,762	88.1%
Putnam	72,304	6,901	9.5%	65,403	90.5%

Florida	19,934,451	4,806,854	24.1%	15,127,597	75.9%
United States	318,558,162	55,199,107	17.3%	263,359,055	82.7%

Data Source: US Census Bureau, American Community Survey. 2012-16.

Change in Total Population

Florida continues to grow in population, recently surpassing New York as the third largest State in the nation. According to the U.S. Census Bureau, between 2000 and 2010 the population in the report area grew by 132,214 persons, a change of 18.9%, slightly faster than Florida and significantly faster than the United States. A significant shift in population impacts healthcare providers and the utilization of community resources.

	2000 Census	2010 Census	Change, 2000-2010	% Change, 2000-2010
CHNA Region	699,187	831,401	132,214	18.9%
Alachua	217,953	247,336	29,383	13.5%
Bradford	26,088	28,520	2,432	9.3%
Columbia	56,513	67,531	11,018	19.5%
Levy	34,450	40,801	6,351	18.4%
Marion	258,916	331,298	72,382	28.0%
Putnam	70,423	74,364	3,941	5.6%
Suwannee	34,844	41,551	6,707	19.3%
Florida	15,982,378	18,801,310	2,818,932	17.6%
United States	280,405,781	307,745,539	27,339,758	9.8%

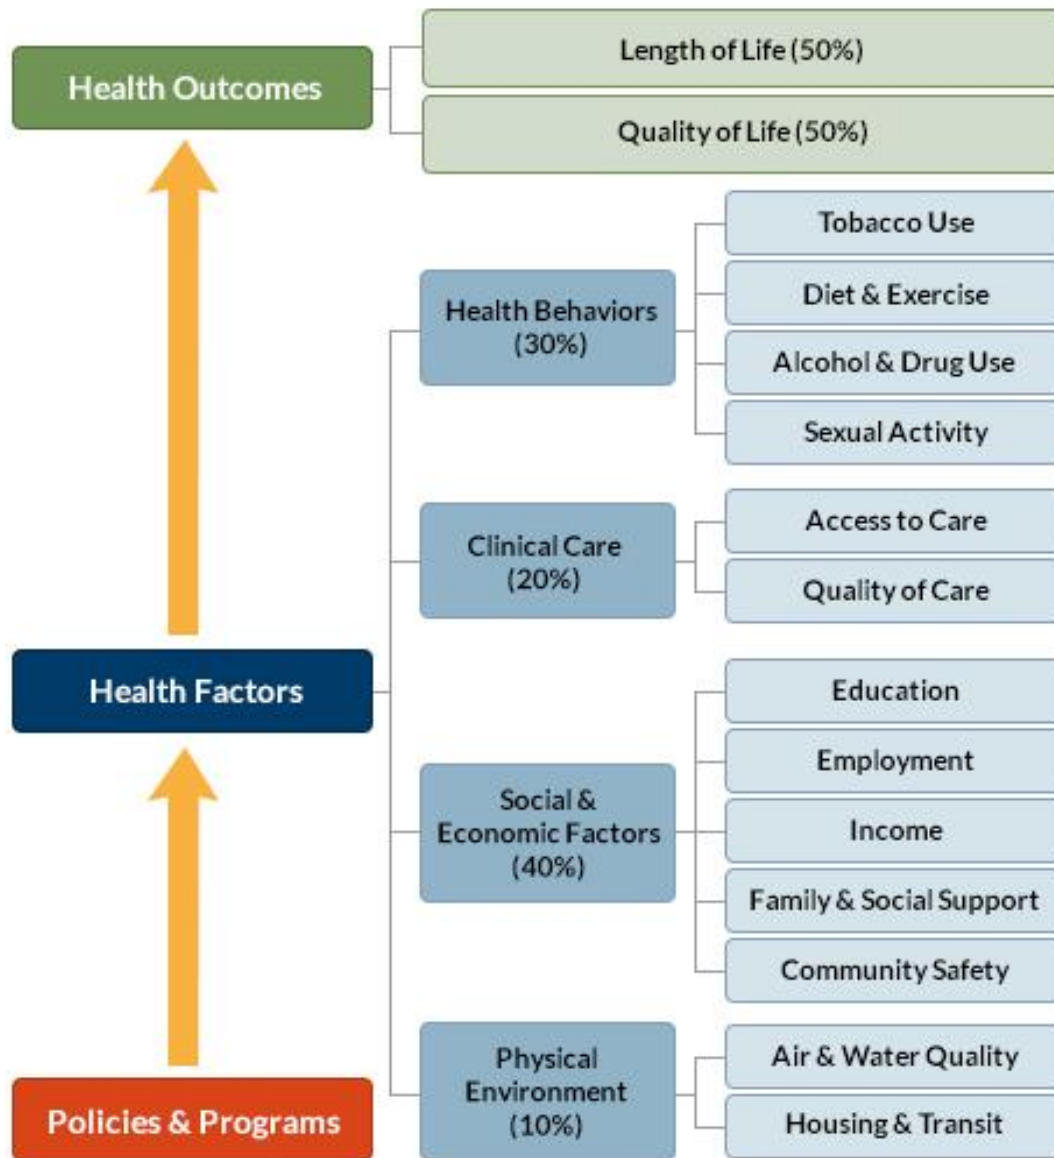

Data Source: US Census Bureau, Decennial Census. 2000 - 2010.

Data Analysis

An extensive analysis of health and socio-economic data of residents of the defined CHNA seven-county region has been performed. Data included health metrics as well as additional information from a wide variety of sources. Data sources included: CDC, U.S. Census Bureau, Conduent - Healthy Communities Institute (HCI), State of Florida Department of Health, Robert Wood Johnson Foundation 2019 and 2016 County Health Rankings, Americas' Health Rankings, Community Commons multi-county reports 2019 and 2018, 2013 and 2016 Alachua County Health Needs Assessments, 2018 Alachua County Racial Inequity study, 2015 Marion County Health Needs Assessment, 2019 Alachua and Marion County Community Health Surveys, 2019 United Way of North Central Florida ALICE reports, 2019 United Way of Marion County ALICE reports, 2019 United Way of Northeast Florida ALICE reports, United Way 211 Counts data for the United Way organizations serving North Central Florida, Marion County and Northeast Florida, GNV4ALL-GEZ 2018 Canvassing survey results, UF Health Shands Hospital internal data, UF HealthStreet Community Needs Assessment, UF Health Putting Families First 2015 surveillance survey results and UF Health internal data.

Due to the variety, breadth and quantity of the data resources reviewed and analyzed for the 2019 UF Health Shands Hospital CHNA, the CHNA document itself includes key data and concept review.

The County Health Rankings & Roadmaps program, a collaboration between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute, uses the graphic below to illustrate the model of population health and weighting of data components reflected in their county health rankings methodology:

The measures evaluated can be organized into two broad categories: health outcomes and health factors. Health outcomes include events such as premature death and babies born with low birthweight. Health factors include behaviors such as smoking and physical inactivity; clinical care factors such as the supply of providers in a community and rates of preventable hospital stays; social and economic factors such as education attainment and percentage of children who live in poverty; and elements of the physical environment such as air pollution and long commutes.

As shown in the table below, the seven counties that make up the 2019 CHNA region reflect a broad range of scores when compared with all of Florida's 67 counties, from Alachua County's rank of 1st (best) in the state for clinical care measures to Putnam County's rank of 67th (worst) for health factors. Sadly, with the exception of

Suwannee County, the remaining six CHNA counties ranked lower in the 2019 health outcomes category (length and quality of life) than in 2016. Further in 2019, with the exception of Alachua County, the remaining six CHNA counties ranked in the bottom quartile for health outcomes (ranking score above 50).

The predominant trend for these seven counties is that of “below average” (i.e., a rank of 34th – 67th), and most of the counties rank in the bottom quartile on several measures. For example, five of the seven counties continue to rank in the bottom quartile for length of life (Bradford, Columbia, Levy, Marion and Putnam) which makes up 50% of Health Outcomes category. Four of the CHNA counties rank in the bottom quartile for health behaviors (Bradford, Columbia, Putnam and Suwannee).

There is much discussion and debate in public health about the wide variety of social determinants that impact health status and health outcomes. Factors include demographics (age, sex, race, ethnicity); social and economic variables (poverty, education, employment); physical environment (crime, water, air); clinical care (access, insurance status, quality, chronic conditions); and health behaviors (nutrition, fitness, lifestyle). There is a growing recognition that residents' health status is impacted by many factors outside of traditional healthcare. The federal Patient Protection and Affordable Care Act (ACA), which mandated that not-for-profit health systems conduct Community Health Needs Assessments every three years, is in part a national policy effort to recognize that health is about more than traditional healthcare. The graphic below developed by Kaiser Permanente illustrates another view of how various factors may impact individuals' health status:

Health is About More Than Clinical Care

Health is driven by multiple factors that are intricately linked – of which medical care is one component.

Page 6

KAISER PERMANENTE®

Social and Economic Factors

With the tremendous amount of raw data available to analyze, it is often difficult to discern areas of focus and meaning. As part of the CHNA data analyses and the recognition that there is power in the access, dissemination and use of timely data to impact community health outcomes, UF Health Shands Hospital has made a community dashboard resource available on the public UFHealth.org website. The dashboard can be found at UFHealth.org under the Community tab at:

<https://ufhealth.org/community-health>

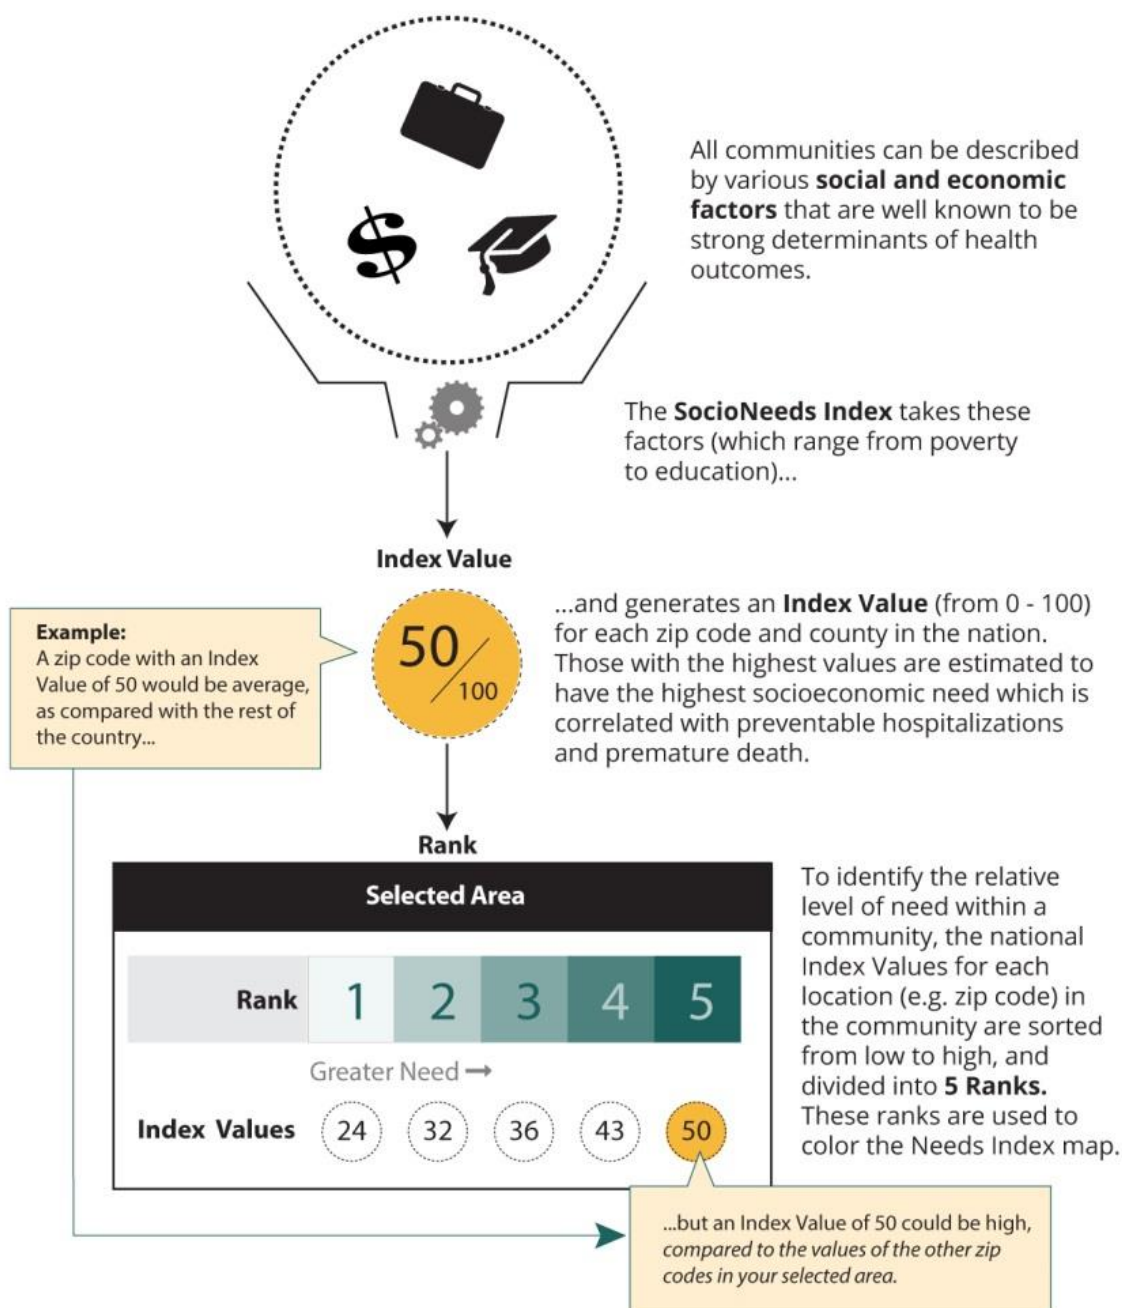

The embedded dashboard resource is powered by Conduent - Healthy Communities Institute (HCI). The dashboard allows community members, researchers and others to access a variety of health and health-related data metrics by county and zip code. The data are presented in a user friendly format and allow drill-down capability by the user.

In looking at the various sources of data, an overarching trend across the region is poverty status. While there are pockets of higher income population, primarily in Alachua County, the majority of the region reflects a disproportionately lower socio-economic trend. Coupled with relatively low educational status across much of the region, this reflects a significant challenge for the community that unfavorably impacts health status.

One of the tools within the UF Health dashboard resource is a proprietary socio-economic rating system that includes a mathematical model which layers economic (poverty, employment, income inequality), education

and health indicators and scores communities across the country, by zip code, on a scale of zero to 100. The graphic below illustrates how the HCI SocioNeeds scoring metric is calculated and assigned.

How it Works

Why is the SocioNeeds Index important?

Community health improvement efforts must determine which sub-populations are most in need in order to most effectively focus services and interventions. Social and economic factors are well known to be strong determinants of health outcomes – those with a low socio-economic status are more likely to suffer from chronic conditions such as diabetes, obesity, and cancer. The SocioNeeds Index summarizes multiple socio-economic indicators into one composite score for easier identification of high need areas by zip code or county.

To use the SocioNeeds Index within a community, *the zip codes or counties with the highest Index Values are estimated to have the highest socio-economic need.* The Index Value for each location is compared to all other similar locations (i.e. counties compare to other counties and zip codes to other zip codes) within the comparison area to assign a relative rank (1-5). Zip codes are ranked using natural breaks classification, which groups the zip codes into clusters based on similar index values. ***A rank of 5 reflects the highest relative need; a 1 reflects the lowest level of need.***

The SocioNeeds Index tool is calculated for a community from several social and economic factors (ranging from poverty to education) that may impact health or access to care. The index is correlated with potentially preventable hospitalization rates, and is calculated using Nielsen Claritas population estimates for 2019.

The 2019 and 2016 SocioNeeds Index table for the CHNA region is included below. Within the CHNA region the 2019 ranking by zip codes reflects a disproportionate range of scores ranging from 13.3 in one Alachua County zip code with 25,902 residents to 96.7 in one Marion County zip code with an estimated 12,761 residents. Alachua County has the widest variation of scores across its zip codes (a low of 13.3 to a high of 93.3).

In 2019 Alachua and Marion Counties are the only Counties in the CHNA region with ranking scores in the category of 1 or 2. Alachua County is the only CHNA County with zip code rankings cores of 1. Similar to the 2016 analysis, in 2019, Suwannee County continues to have the narrowest band of index scores (a low of 80.5 to a high of 96.4). In 2019, Suwannee also continues to be the only county in the CHNA region with all zips ranking either a 4 or 5 score (highest need).

The data tables below were accessed from UF Health Shands Community Dashboard, June 2019 and June 2016. Data note: The highest and lowest index scores for 2019 and 2016 are highlighted in yellow.

SocioNeeds Index Table for the Zip Codes in the 7-County CHNA Region

Zip Code	2019 Index	2019 Rank	2019 Population Estimate	2016 Index	2016 Rank	2016 Population estimate	County(ies)

32060	88	5	21,830	83.9	4	21,735	Suwannee

Across a variety of data sources, poverty in the CHNA area is a prevalent issue, across all counties. At 30%, the percentage of children living in poverty (at or below 100% of the federal poverty level) is higher in the CHNA region than the state average rate of 23% and the United States rate of 21%. Alachua County has the lowest rate in the region with 24% of children living in poverty, but even so almost one in every four children is living below 100% of Federal poverty level. Levy, Putnam and Suwannee have close to 40% of children living at or below 100% of FPL, which means that in those counties, two of every five children live in poverty.

Poverty - Children Below 100% FPL

In the seven-county CHNA report area, 30% or 48,285 children aged 0-17 are living in households with income below the federal poverty level (FPL). This indicator is relevant because poverty creates barriers to access including health services, healthy food, and other necessities that contribute to poor health status.

Geography	Total Population	Population Under Age 18	Population Under Age 18 in Poverty	% Population Under Age 18 in Poverty
7-County CHNA Region	810,503	159,950	48,285	30%
Alachua	241,136	45,369	10,745	24%
Bradford	23,584	5,229	1,315	25%
Columbia	63,169	14,654	4,122	28%
Levy	39,046	7,739	3,040	39%
Marion	330,812	62,450	19,104	31%

Population Below the Poverty Level, Children (Age 0-17), Percent by Tract, ACS 2012-16

The data for children and the overall population living beneath 200% of the federal poverty level (FPL) also reveal higher rates than benchmark rates for Florida and the United States overall.

Poverty - Children Below 200% FPL

In the seven-county CHNA report area, 55% or 88,404 children are living in households with income below 200% of the federal poverty level (FPL).

Geography	Total Population Under Age 18	Population Under Age 18 Below 200% FPL	% Population Under Age 18 Below 200% FPL
7-County CHNA Region	159,950	88,404	55%

Percent Population Under Age 18 Below 200% FPL

Source: US Census Bureau, American Community Survey. 2012-16. Source geography: Tract

Overall rates of poverty for residents in the designated CHNA area are better than the rates for children. However, poverty rates indicate 44% of residents in the CHNA region living below 200% of FPL. Those poverty incidence rates are worse than the Florida rate of 38% and the United States rate of 35%.

Poverty - Population Below 200% FPL

In the report area 43% or 350,718 individuals are living in households with income below 200% of the federal poverty level (FPL).

Geography	Total Population	Population with Income Below 200% FPL	% Population with Income Below 200% FPL

Insurance - Population Receiving Medicaid

This indicator reports the percentage of the population with insurance enrolled in Medicaid (or other means-tested public health insurance). This indicator is relevant because it assesses vulnerable populations which are more likely to have multiple healthcare access, health status, and social support needs; when combined with poverty data, providers can use this measure to identify gaps in eligibility and enrollment.

Geography	Total Pop (For Whom Insurance Status is Determined)	Population with Any Health Insurance	Population Receiving Medicaid	% of Insured Population Receiving Medicaid
7-County CHNA Region	825,743	703,528	167,108	24%

Population with No High School Diploma

Within the seven-county report area there are 79,314 persons aged 25 and older without a high school diploma (or equivalency) or higher. This represents 13.6% of the total population aged 25 and older. This indicator is relevant because educational attainment is linked to positive health outcomes (Freudenberg and Ruglis, 2007, http://www.cdc.gov/pcd/issues/2007/oct/07_0063.htm)

Residents age 25+ without a high school diploma percentages range from a low of 7% in Alachua County, which is below the state average, to a high of 23% in Bradford County

The 2019 high school graduation rates range from a high of 93% in Suwannee County, which is above the state average of 82%, to a low of 72% in Putnam County. Similar to overall Florida rates, the 2019 graduation rate values for the CHNA region are all higher than 2016 rates. The rates of residents with some college remained relatively stable.

Health Outcomes

Length of Life

While everyone will die, rates of mortality are tracked as an outcome and included in many quality metrics in healthcare. The County Health Rankings & Roadmaps program calculates and reports a measure of premature death reflecting years of potential life lost. The rate tracks the number of deaths of residents under 75 years of age and computes the years of potential life lost before age 75 per 100,000 population for each county. This measure of premature death reflects a number of factors and causes related to mortality.

In the 2019 rankings, Alachua County ranked 12th in the state for length of life metrics with a calculated 6,894 years of potential life lost per 100,000 residents, while Putnam County ranked 66th out of Florida's 67 counties, with 11,901 years of potential life lost per 100,000 residents. In the seven county CHNA region, similar to overall data for Florida, all counties had increased rates of premature death (years of potential life lost) in 2019 when compared to 2016.

Length of Life Rankings and Premature Death Rates 2019 and 2016

County Health Rankings & Roadmaps Building a Culture of Health, County by County								
	Florida	Alachua	Bradford	Columbia	Levy	Marion	Putnam	Suwannee
Length of Life – 2019		12	65	58	62	59	66	48
Length of Life – 2016		13	59	57	61	47	64	53
Premature Death – 2019	7,214	6,894	11,007	10,029	10,841	10,266	11,901	9,397
Premature Death – 2016	6,800	6,600	9,600	9,300	9,900	8,700	10,500	9,000

Premature Death figures reflect years of potential life lost before age 75 per 100,000 population (age-adjusted).

Source: Robert Wood Johnson Foundation and University of Wisconsin Population Health Institute, County Health Rankings & Roadmaps program. Data accessed May 2019 and June 2016 via <http://www.countyhealthrankings.org>

Within the category of premature death, mortality statistics which are unfavorable compared to benchmarks are indicators of areas where healthcare improvements can be made to impact the composite score and decrease years of potential life lost. Data on several of those areas of concern are presented on the following pages.

Infant Mortality

This indicator reports the rate of deaths to infants less than one year of age per 1,000 births. This indicator is relevant because high rates of infant mortality indicate the existence of broader issues pertaining to access to care and maternal and child health.

The leading causes of death among infants are birth defects, preterm delivery, low birth weight, Sudden Infant Death Syndrome (SIDS), and maternal complications during pregnancy.

Infant Mortality Counts and Rate - 2017, 2016 and 2015 Seven County CHNA Region

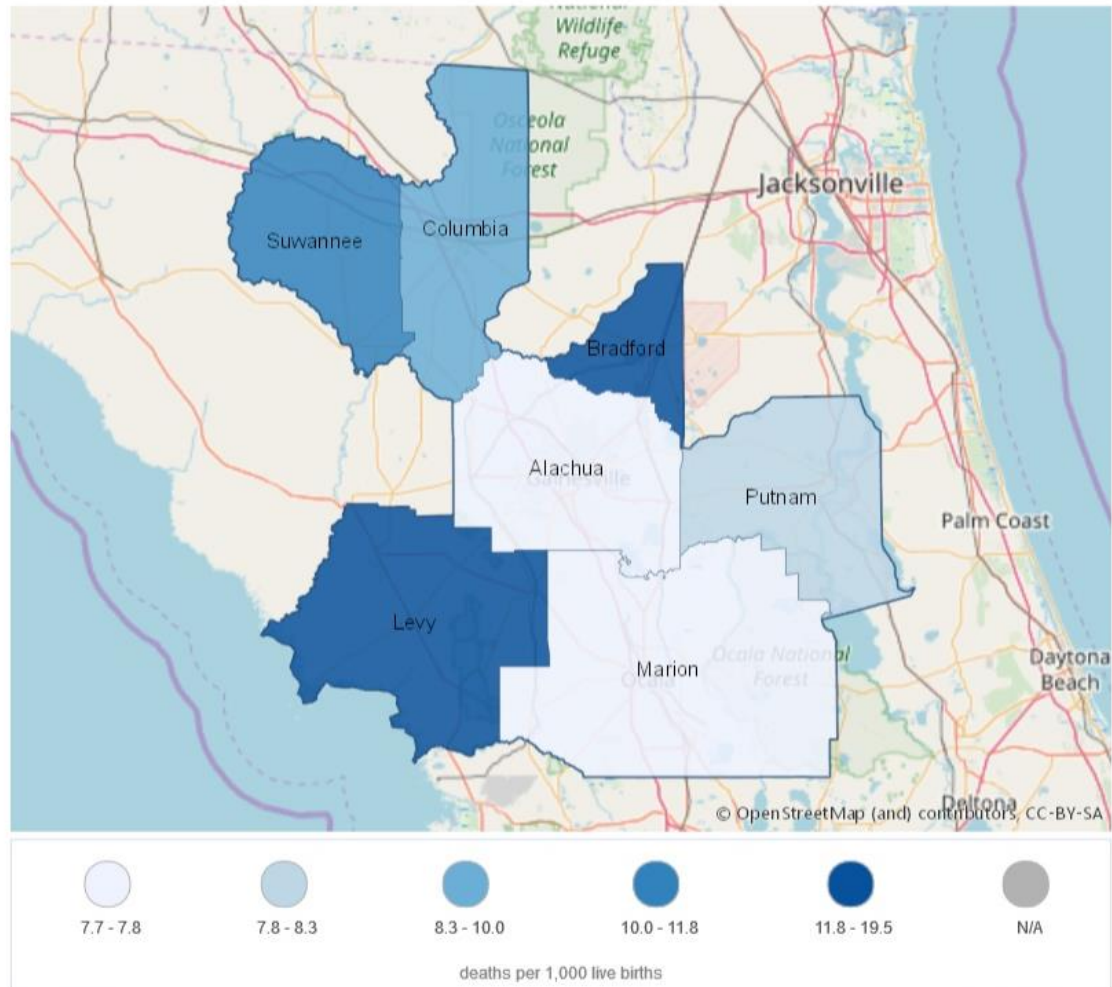

Infant Deaths, Counts and Rates Per 1,000 Live Births						
	2017		2016		2015	
County	Count	Rate	Count	Rate	Count	Rate

Measurement Period: 2017

Mortality - Cancer

This indicator reports the rate of death due to malignant neoplasm (cancer) per 100,000 population. Figures are reported as crude rates, and as rates age-adjusted to year 2000 standard. Rates are re-summarized for report areas from county level data, only where data are available. This indicator is relevant because cancer is a leading cause of death in the United States.

Geography	Total Population	Average Annual Deaths, 2010-2014	Crude Death Rate (Per 100,000 Pop.)	Age-Adjusted Death Rate (Per 100,000 Pop.)
7-County CHNA Region	848,885	2,271	267.5	188.0

 Report Area

Mortality - Coronary Heart Disease

Within the report area the rate of death due to coronary heart disease (ICD10 Codes I20-I25) per 100,000 population is 118.3. This rate is greater than the Healthy People 2020 target of less than or equal to 103.4. Figures are reported as crude rates, and as rates age-adjusted to year 2000 standard. Rates are summarized for report areas from county level data, only where data is available. This indicator is relevant because heart disease is a leading cause of death in the United States. In the seven county CHNA region, Alachua is the only county with an adjusted death rate lower than both the Florida and US rates. All other counties are significantly higher than those benchmark rates.

Geography	Total Population	Average Annual Deaths, 2010-2014	Crude Death Rate (Per 100,000 Pop.)	Age-Adjusted Death Rate (Per 100,000 Pop.)

□ Report Area

Mortality - Heart Disease

Within the report area the rate of death due to heart disease (ICD10 Codes I00-I09, I11, I13, I20-I151) per 100,000 population is 175.9 which is higher than both the US and FL rates. Suwannee and Marion Counties lead the CHNA region with the highest mortality rates from heart disease. Figures are reported as crude rates, and as rates age-adjusted to year 2000 standard. Rates are summarized for report areas from county level data, only where data is available. This indicator is relevant because heart disease is a leading cause of death in the United States.

Geography	Total Population	Average Annual Deaths, 2010-2014	Crude Death Rate (Per 100,000 Pop.)	Age-Adjusted Death Rate (Per 100,000 Pop.)

 Report Area

Mortality - Stroke

Within the report area there are an estimated 36.1 deaths due to cerebrovascular disease (stroke) per 100,000 population. This is greater than the Healthy People 2020 target of less than or equal to 33.8. Figures are reported as crude rates, and as rates age-adjusted to year 2000 standard. Rates are summarized for report areas from county level data, only where data is available. This indicator is relevant because stroke is a leading cause of death in the United States.

Geography	Total Population	Average Annual Deaths, 2010-2014	Crude Death Rate (Per 100,000 Pop.)	Age-Adjusted Death Rate (Per 100,000 Pop.)

□ Report Area

Mortality - Motor Vehicle Accident

This indicator reports the rate of death due to motor vehicle crashes per 100,000 population, which include collisions with another motor vehicle, a non-motorist, a fixed object, and a non-fixed object, an overturn, and any other non-collision. This indicator is relevant because motor vehicle crash deaths are preventable and they are a cause of premature death. The seven county CHNA region has significantly higher deaths than both the US and Florida rates. Levy and Suwannee Counties have the highest motor vehicle accident death rates in the CHNA region.

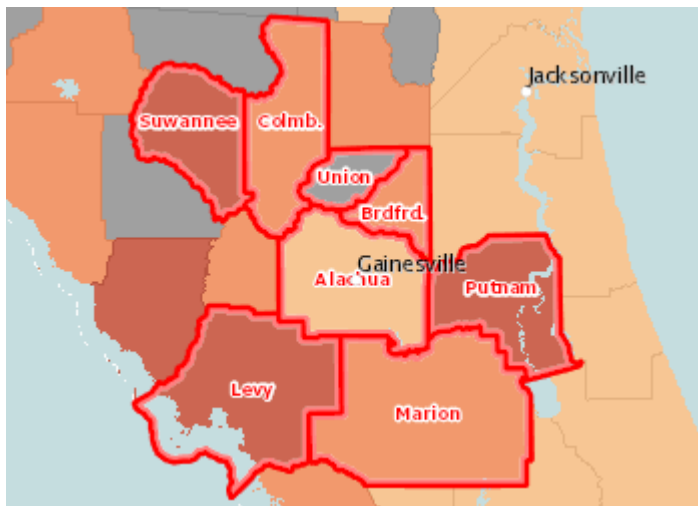

Geography	Total Population	Average Annual Deaths, 2010-2014	Crude Death Rate (Per 100,000 Pop.)	Age-Adjusted Death Rate (Per 100,000 Pop.)

Additional Health Factors

The Robert Wood Johnson Foundation County Health Rankings & Roadmaps program, Community Commons, CDC and HCI provide data rankings against benchmarks which provide insight into residents' health factors and health behaviors. These indicators help assess residents' Quality of Life. These data include categories of health behaviors that can broadly be referred to as nutrition, fitness and lifestyle (healthy eating, physical activity, lifestyle - tobacco, alcohol, obesity) as well as clinical indicators such as access to care – including insurance status, rates of health conditions (obesity, hypertension), availability of providers (primary, mental and dental) and clinical indicators such as avoidable hospital admissions and ED visits for chronic and acute conditions (diabetes, asthma, heart failure, etc.). This wide variety of data provides insight into specific areas of need within a community.

Access to Care - Uninsured

As a result of the ACA more Americans have health insurance than previously. However there are still large numbers of uninsured or underinsured residents in Florida and within the defined CHNA region. The County Health Rankings & Roadmaps program reports a significant number of Floridians with no health insurance.

Percentage of Population < 65 Years of Age without Health Insurance, 2019 and 2016

Population Living in a Health Professional Shortage Area

This indicator reports the percentage of the population that is living in a geographic area designated as a "Health Professional Shortage Area" (HPSA), defined as having a shortage of primary medical care, dental or mental health professionals. This indicator is relevant because a shortage of health professionals contributes to access and health status issues. The CHNA region has a significantly higher rate of HPSA designation than either the US or Florida.

Geography	Total Area Population	Population Living in a HPSA	Percentage of Population Living in a HPSA
7-County CHNA Region	831,401	584,065	70.8%
Florida	18,801,310	10,284,868	54.7%
United States	308,745,538	102,289,607	33.1%

Tobacco Usage - Current Smokers

Tobacco is the agent most responsible for avoidable illness and death in America today. According to the CDC, tobacco use brings premature death to almost half a million Americans each year, and contributes to profound disability and pain in many others. The World Health Organization states that approximately one-third of all tobacco users in the U.S. will die prematurely because of their dependence on tobacco. Areas with a high smoking prevalence will also have greater exposure to secondhand smoke for non-smokers, which can cause or exacerbate a wide range of adverse health effects such as cancer, respiratory infections, and asthma.

Tobacco Use - Adolescents who use Electronic Vaping: Past 30 Days

This indicator shows the percentage of 6th-12th grade students who have used electronic vaping in the 30 days prior to the survey.

After years of declining youth tobacco use, recent national trends have shown increased tobacco use in adolescents due primarily to electronic vaping devices (e-cigs). The FDA, the CDC and the U.S. Surgeon General have all declared this trend in youth tobacco use a public health crisis and an epidemic.

Health behavior patterns formed in adolescence play a crucial role in health throughout life. Those who begin tobacco use young are more likely to have a long-term addiction to nicotine than people who begin tobacco use later in life, putting them at greater risk for smoking-related illness and death. Electronic vaping is also known as using an electronic cigarette, e-cigarette or e-cig. Tobacco use begins and is established primarily during adolescence. Preventing adolescent tobacco use is critical to ending the tobacco epidemic in the United States. Statistics show that 95% of lifelong smokers start before the age of 21.

As shown in the preceding data and in the following table from the Robert Wood Johnson Rankings, there continues to be much room for improvement for the health of the residents of the seven-county service area.

The Healthy Communities Institute (HCI) provide rankings for health factors and health behavior metrics to help communities develop a road map for areas of concern and focused improvement efforts related to residents' health status. Included below are health data indicator reports from HCI that summarize the top 25 worst indicators for each county. An explanation of the methodology HCI uses to develop these indicator reports follows.

Healthy Communities Institute Data Scoring Tool - Methodology

Scoring Method

Data Scoring is done in three stages:

For each indicator, your county is assigned a score based on its comparison to other communities, whether health targets have been met, and the trend of the indicator value over time. These comparison scores range from 0-3, where 0 indicates the best outcome and 3 the worst. Availability of each type of comparison varies by indicator and is dependent upon the data source, comparability with data collected for other communities, and changes in methodology over time.

Comparison to a Distribution of County Values: Within State and Nation

For ease of interpretation and analysis, indicator data on the Community Dashboard is visually represented as a green-yellow-red gauge showing how the community is faring against a distribution of counties in the state or the United States. A distribution is created by taking all county values within the state or nation, ordering them from low to high, and dividing them into three groups (green, yellow, red) based on their order. Indicators with the poorest comparisons (“in the red”) scored high, whereas indicators with good comparisons (“in the green”) scored low.

HCI Platform County Distribution Gauge

Comparison to Values: State, National, and Targets

Your county is compared to the state value, the national value, and target values. Targets values include the nation-wide Healthy People 2020 (HP2020) goals as well as locally set goals. Healthy People 2020 goals are national objectives for improving the health of the nation set by the Department of Health and Human Services’ (DHHS) Healthy People Initiative. For all value comparisons, the scoring depends on whether the county value is better or worse than the comparison value, as well as how close the county value is to the target value.

HCI Platform Compare to State or National Value

HCI Platform Compare to Healthy People 2020 Target

Trend Over Time

The Mann-Kendall statistical test for trend was used to assess whether the county value is increasing over time or decreasing over time, and whether the trend is statistically significant. The trend comparison uses the four most recent comparable values for the county, and statistical significance is determined at the 90% confidence level. For each indicator with values available for four time periods, scoring was determined by direction of the trend and statistical significance.

Missing Values

Indicator scores are calculated using the comparison scores, availability of which depends on the data source. If the comparison type is possible for an adequate proportion of indicators on the community dashboard, it will be included in the indicator score. After exclusion of comparison types with inadequate availability, all missing comparisons are substituted with a neutral score for the purposes of calculating the indicator’s weighted average. When information is unknown due to lack of comparable data, the neutral value assumes that the missing comparison score is neither good nor

Indicator Scoring

Indicator scores are calculated as a weighted average of all included comparison scores. If none of the included comparison types are possible for an indicator, no score is calculated and the indicator is excluded from the data scoring results.

The following indicator scoring tables ranking the top 25 key data insights for each county were downloaded using the UF Health Shands Hospital Community Dashboard resource powered by the Healthy Communities Institute 2019 and 2016 Data Scoring Tool(s). The UF Health Shands Hospital Community dashboard is found at <https://ufhealth.org/community-health>. Both 2019 and 2016 results for the Top 25 indicators are presented for each CHNA region county in the detailed tables that follow.

Community Input

One of the significant components in a community health needs assessment is community input. Across the CHNA region extensive community input was provided and collected from a wide variety of sources. In 2019 both Marion and Alachua counties conducted Community Health surveys with over 2,300 resident responses. The responses reflect residents' perspectives of their communities' health as well as their personal health. Some of the results of those data are presented below.

Internally within UF Health, the HealthStreet program - which is part of the Department of Epidemiology and has in excess of 7,500 clients in a multi-county region - provided their community assessment data. For the designated CHNA region, HealthStreet had 4,960 members enrolled. The HealthStreet program is an advocate model which focuses on improving participants' health (by referring and connecting clients to available resources that can help them improve their health) and thereby improve the overall health status of the community. The UF Health Putting Families First (PFF) program is a year-long interdisciplinary educational project featuring UF Health students from the Colleges of Medicine, Nursing, Dentistry, Pharmacy, Health and Health Professions and Veterinary Medicine, who are assigned in teams to a year-long focused project with individual families. The surveillance data gathered from the PFF program were used to provide insight about health needs obtained from their clients.

The United Way organizations in North Central Florida, Marion County and Northeast Florida also have data available through 211Counts that provided data about resident requests to their 211 assistance resources which include health and other programs.

Focused interviews about health needs were also conducted with key knowledgeable health representatives at health departments and other providers in several counties.

The community input derived from the variety of sources is intended to help validate, assess and prioritize the data collected for the needs assessment. Common themes and areas of focus were developed as a result of these conversations with community members and community organizations and analyses of survey input.

Following are some examples of the community input that was used to help prioritize the needs identified through the health assessment process.

The seven county CHNA region is served by three separate United Way organizations. United Way of North Central Florida serves – Alachua, Bradford and Levy Counties, United Way of Marion County serves Marion County and United Way of Northeast Florida serves Columbia, Putnam and Suwannee Counties. Nationally United Way Organizations assist residents in need with the 211 line requests via telephone call for assistance. The three Florida based United Way Agencies track their requests for assistance through a service called 211 Counts. The requests are documented and tracked in 13 categories to better understand and identify requested needs. Healthcare and Mental Health requests are tracked as separate groups within the 13 categories.

The largest number of requests for all three CHNA region United Way organizations were for housing and utilities assistance. Healthcare requests ranked 4th and mental health ranked 7th in Alachua, Bradford and Levy Counties with the total number of requests in both categories of 1,393 or about 6% of total requests. In Marion County, healthcare requests ranked 5th and mental health ranked 7th out of the 13 categories with a total of 2,632 requests, approximately 10% of the total requests in all categories. In Columbia, Putnam and Suwannee counties the healthcare and mental health requests ranked 3rd and 7th, respectively with a total of 169 requests, about 12% of the total 211 requests in that geographic area.

211 Counts reports were run for the various CHNA counties. Summary reports are included below for requests made during the one year period of June 14, 2018 through June 13, 2019.

Key Insights/Significant Health Needs

While there are many areas for improvement noted across the variety of available data on residents of the seven-county CHNA region, several factors and behaviors that stand out as recurring, common areas of concern are listed below (note: list is not prioritized).

- Poverty
- Food insecurity
- Obesity
- Infant mortality
- Teen pregnancy
- Sexually transmitted infections (STI's)
- Physical inactivity
- High blood pressure
- Diabetes
- Asthma
- Cardiovascular disease
- Kidney Disease
- Tobacco use
- Insurance status (continued high rates of uninsured)
- Alcohol use
- Hospitalization and ED visits due to alcohol-related causes
- ED visits due to dental reasons
- Accidental death (motor vehicle accidents, pedestrian accidents)
- Violent crime
- Substance abuse
- Suicide
- Mental health
- Low rates (shortage) of mental health providers
- Low rates (shortage) of dentists
- Low rates (shortage) of primary care physicians

Community Health Implementation Plan (CHIP)

Upon consideration of the data on residents of the seven-county community, UF Health Shands Hospital decided to continue with the two original broad strategic goals as the focus of the community health improvement workplan:

- Residents will be able to ***access*** comprehensive primary care and preventive services
- Promote ***wellness*** among residents

UF Health Shands Hospital has identified the following implementation items as the most appropriate activities for it to undertake to further these goals:

- Maintain safety net provider capacity
- Educate the uninsured regarding new options for insurance coverage
- Maintain capacity as the clinical training site for future healthcare providers – including physicians, nurses and other allied health professionals
- Maintain programs of care coordination for reducing avoidable hospital use
- Participate in a medical respite program for homeless persons
- Opioid prescribing and take back practices
- Educate public about Trauma prevention using Trauma Injury Prevention Specialist
- Educate and encourage residents to increase community vaccination rates
- Increase access to cardiovascular risk management and education
- Increase cancer screening and detection
- Maintain and expand the UF Health Shands worksite wellness programs
- Maintain policies and incentive programs to promote breastfeeding among mothers
- Increase access to prenatal and postnatal care
- Reduce prevalence and impact of tobacco use
- Improve mental health through access to resources for stress management such as peaceful outdoor environment, poetry readings and art gatherings
